

LATE-NIGHT & MORNING PLANETS EPHEMERIS

Observational Site: Passikudah Beach, Sri Lanka | July 14–31, 2026 Transitions

PLANET	OBSERVATIONAL DATE	ASTRONOMICAL RISE	ASTRONOMICAL SET	ALTITUDE / DIRECTION (AT 7:00 PM)	OBSERVATIONAL CONTEXT & QUALITY
Saturn	July 14	11:30 PM	11:36 AM	Below Horizon	NOT VISIBLE Rises late at night, long after the evening window closes.
	July 22	10:58 PM	11:05 AM	Below Horizon	NOT VISIBLE Rising time shifts slightly earlier, but still late-night only.
	July 31	10:22 PM	10:30 AM	Below Horizon	NOT VISIBLE Rises in East after 10:00 PM; ideal for late-night viewing.
Mars	July 14	2:57 AM	3:26 PM	Below Horizon	NOT VISIBLE Morning object. Rises in East in early hours of dawn.
	July 22	2:25 AM	2:54 PM	Below Horizon	NOT VISIBLE Pure morning sky planet; best seen 1 hour before sunrise.
	July 31	1:49 AM	2:18 PM	Below Horizon	NOT VISIBLE Rises after midnight; visible in eastern sky before dawn.
Uranus	July 14	2:31 AM	2:58 PM	Below Horizon	NOT VISIBLE Morning object. Telescope required during early hours of the day.
	July 31	1:23 AM	1:50 PM	Below Horizon	NOT VISIBLE Rises after midnight; strictly a late-night/morning planet.
Neptune	July 14	10:48 PM	10:51 AM	Below Horizon	NOT VISIBLE Rises late at night; requires telescope and dark sky map.
	July 31	9:40 PM	9:43 AM	Below Horizon	NOT VISIBLE Rises shortly after 9:30 PM. Below horizon during target window.

All times are corrected for local standard time in Sri Lanka (GMT +5:30). High-altitude coordinates.
