

PRIMARY EVENING PLANETS EPHEMERIS

Observational Site: Passikudah Beach, Sri Lanka | July 14–31, 2026 Transitions

PLANET	OBSERVATIONAL DATE	ASTRONOMICAL RISE	ASTRONOMICAL SET	ELEVATION (AT 7:00 PM)	VISIBILITY & TRACKING GUIDE
Venus	July 14	8:56 AM	9:13 PM	~28°	EXCELLENT Shines brilliantly in the west-northwest as the evening star. Easy to see.
	July 22	9:05 AM	9:15 PM	~29°	EXCELLENT Bright western beacon; stands out clearly as astronomical twilight darkens.
	July 31	9:12 AM	9:18 PM	~30°	EXCELLENT Shines brilliantly near its evening peak; sets shortly after window closes.
Jupiter	July 14	6:43 AM	7:09 PM	<2°	DIFFICULT Visible briefly on the western horizon during civil twilight. Sets at 7:09 PM.
	July 22	6:21 AM	6:38 PM	Below Horizon	NOT VISIBLE Set prior to the start of the evening window. Obscured by solar halo.
	July 31	5:58 AM	6:04 PM	Below Horizon	NOT VISIBLE Set prior to sunset; fully obscured behind western limb.
Mercury	July 14	5:47 AM	6:07 PM	Below Horizon	NOT VISIBLE Set before sunset. Planet is too close to solar glare.
	July 22	6:00 AM	6:09 PM	Below Horizon	NOT VISIBLE Sets prior to the start of astronomical night; below horizon.
	July 31	6:15 AM	6:10 PM	Below Horizon	NOT VISIBLE Set prior to dusk. Fully obscured.

All times are corrected for Passikudah Beach local standard time (GMT +5:30). High-altitude atmospheric haze might shift visibility thresholds.
